IDENTIFIERS *California

ABSTRACT

A review is provided of tech prep consortia and programs in California, as they relate to the Carl D. Perkins Vocational and Applied Technology Education Act (VATEA) of 1990. First, background information is presented on the VATEA, indicating that it authorizes and provides significant funding to develop and operate four-year tech prep education programs and calls for statewide articulation agreements between secondary schools and postsecondary institutions. Next, the following requirements for curricula in tech prep education majors and programs are outlined: (1) graduation from the secondary school; (2) general education requirements for the associate degree; (3) specific requirements of an occupational degree or certificate; (4) courses that build student competencies in mathematics, science, communications, and technologies; (5) worksite learning experiences; (6) the option to fulfill requirements for a baccalaureate degree; (7) the option to fulfill requirements for a particular baccalaureate degree major; and (8) placement and employment for students. A history of tech prep in California since 1985 is presented and recommendations are made for increasing articulation among educational segments. Finally, an inventory of tech prep programs is provided, including information on fiscal agents (i.e., consortia administering the grant, special projects, and/or first-year consortia); participating institutions; funding amount; and the educational areas focused on in the program. (KP)

# TECH-PREP EDUCATION LOCAL CONSORTIA

## Background Information

**Tech-Prep Education:** The Carl D. Perkins Vocational and Applied Technology Education Act (VATEA) of 1990 authorizes and provides significant funding to develop and operate four-year Tech-Prep Education programs. VATEA also calls for the establishment of statewide technical-preparation education articulation agreements between secondary schools (high schools, regional occupational centers/programs, and adult education schools) and postsecondary institutions through intersegmental consortia. As defined by the United States Department of Education, an articulation

agreement is an intersegmental commitment to a program designed to provide students with a nonduplicative sequence of progressive achievement leading to competencies in a Tech-Prep education program. Congress considers the acquisition of skills in liberal and practical arts, applied academics, and intense technical preparation essential for students entering an ever-changing workplace.

VATEA, which became effective on July 1, 1991, authorized $125 million nationwide to fund cooperative programs and agreements between secondary schools and community colleges. For 1991-92, Congress appropriated $63 million, with $5.9 million allocated to California. Approximately $3.9 million will be administered by the Economic Development/Vocational Education Division within the Chancellor's Office of the California Community Colleges. In 1992-93, Congress allocated an additional $93 million, and of that, California received $9.2 million. The Chancellor's Office of the California Community Colleges is administering $7.2 million. These funds must be used to develop Tech-Prep Education programs, through consortia, which may build on the work and organizational structure of local articulation councils. Tech-Prep Education programs integrate communication skills, mathematics, and science with sound technical preparation. Tech-Prep Education programs consist of two years of secondary school preceding graduation and a minimum of two years of advanced education in the community colleges, in addition to other institutions of higher education that qualify under VATEA should participate.

Tech-Prep Education associate degree programs offer students a dynamic, articulated, and challenging educational pathway. These programs do not replace the college-prep program in high school but instead, represent a parallel pathway for students. The combination of a common core of learning and technical education rests on a foundation of basic proficiency in mathematics, sciences, communications, and technologies within a career area. Course content is presented through an "applied" curriculum in grades 11 and 12, continues during the first two years of postsecondary education, and includes a structured and closely coordinated competency-based curriculum that is built around occupational education career clusters and technical-systems. Local long-range planning efforts should include career and academic advising (as early as junior high school) in preparation for Tech-Prep programs.

The curriculum in Tech-Prep Education majors and programs must meet the following requirements:

- Secondary school graduation requirements;
- General Education requirements for the Associate degree;
- Specific requirements of an occupational degree or certificate;

- Courses that build student competencies in applied mathematics, sciences, communications and technologies through a four-year sequential course of study. Incorporated into the courses are innovative applied instructional strategies; and

- Worksite learning experiences are an integral part of the programs.

Tech-Prep programs may also:

- Fulfill requirements for the Baccalaureate Degree in transferable courses;

- Fulfill requirements for a particular Baccalaureate Degree major (for example, the nursing major); and

- Lead to placement and employment for students.

**Recent History In California:** Secondary school and community college policymakers have set high priority goals to articulate programs and share resources. Since 1985, the Board of Governors of the California Community Colleges and the State Board of Education have identified articulation between secondary schools and community colleges as a priority for action.

During 1986, 21 joint articulation projects received funds through the Carl D. Perkins Vocational Education Act to plan, implement, and expand models for fully institutionalized articulation programs between the schools and community colleges. These projects were referred to as the "2+2" projects. In 1989, State funds supported 18 "2+2+2" articulation projects over a three-year period, which extended the school-college model to the University level. Currently, exemplary "2+2" and "2+2+2" projects serve as demonstration sites to help other educational organizations with the development of articulation programs.

One of the most significant findings to emerge from the independent evaluations of these pilot projects was the critical importance of articulation councils. In almost every case, the most successful projects had established very strong articulation councils as a fundamental part of their articulation effort. Articulation councils serve as an effective mechanism to build new Tech-Prep Education programs.

Although many community colleges and secondary schools have established articulation programs, others have few or none in place. Significantly, even in districts where articulation agreements exist, all too often few students take advantage of such opportunities. The lack of resources and information may be impeding the full implementation of school-college articulation.

To respond to the need for increased articulation among education segments, David Mertes, Chancellor of the California Community Colleges, and Bill Honig, Superintendent of Public Instruction, convened a Joint Task Force on Articulation. The charge of the task force was to seek advice and counsel regarding the expansion of articulation councils. The task force report, *Articulation Councils: Leadership for Cooperation Among Schools, ROP/Cs, Adult Schools, Community Colleges, and Employers*, offers five major recommendations:

1. All California Community Colleges and the schools should establish an articulation council.

2. Articulation and Tech-Prep Education resource consortia should provide technical assistance to schools and colleges in the formation and activities of articulation councils and Tech-Prep Education programs.

3. The California Department of Education and the Chancellor's Office of the California Community Colleges should jointly administer articulation and Tech-Prep Education activities.

4. Through the RFA process, a single source should develop public information and guidance materials.

5. While local support is encouraged and recognized, it is recommended that the funds allocated through the Tech-Prep Education section of the Carl D. Perkins Vocational and Applied Technology Education Act of 1990 support local articulation councils, resource consortia, articulation and Tech-Prep Education public information and guidance materials, and the evaluation of these programs.

Clearly, coordination will be required at the State and local levels to contribute to new progressive efforts in the vocational and the applied technology areas. As stated in the task force report summary, "Articulation councils can be the catalysts for change and reform in the process and content of education."
